

PTC[®] PRODUCT & SERVICE ADVANTAGE[™]

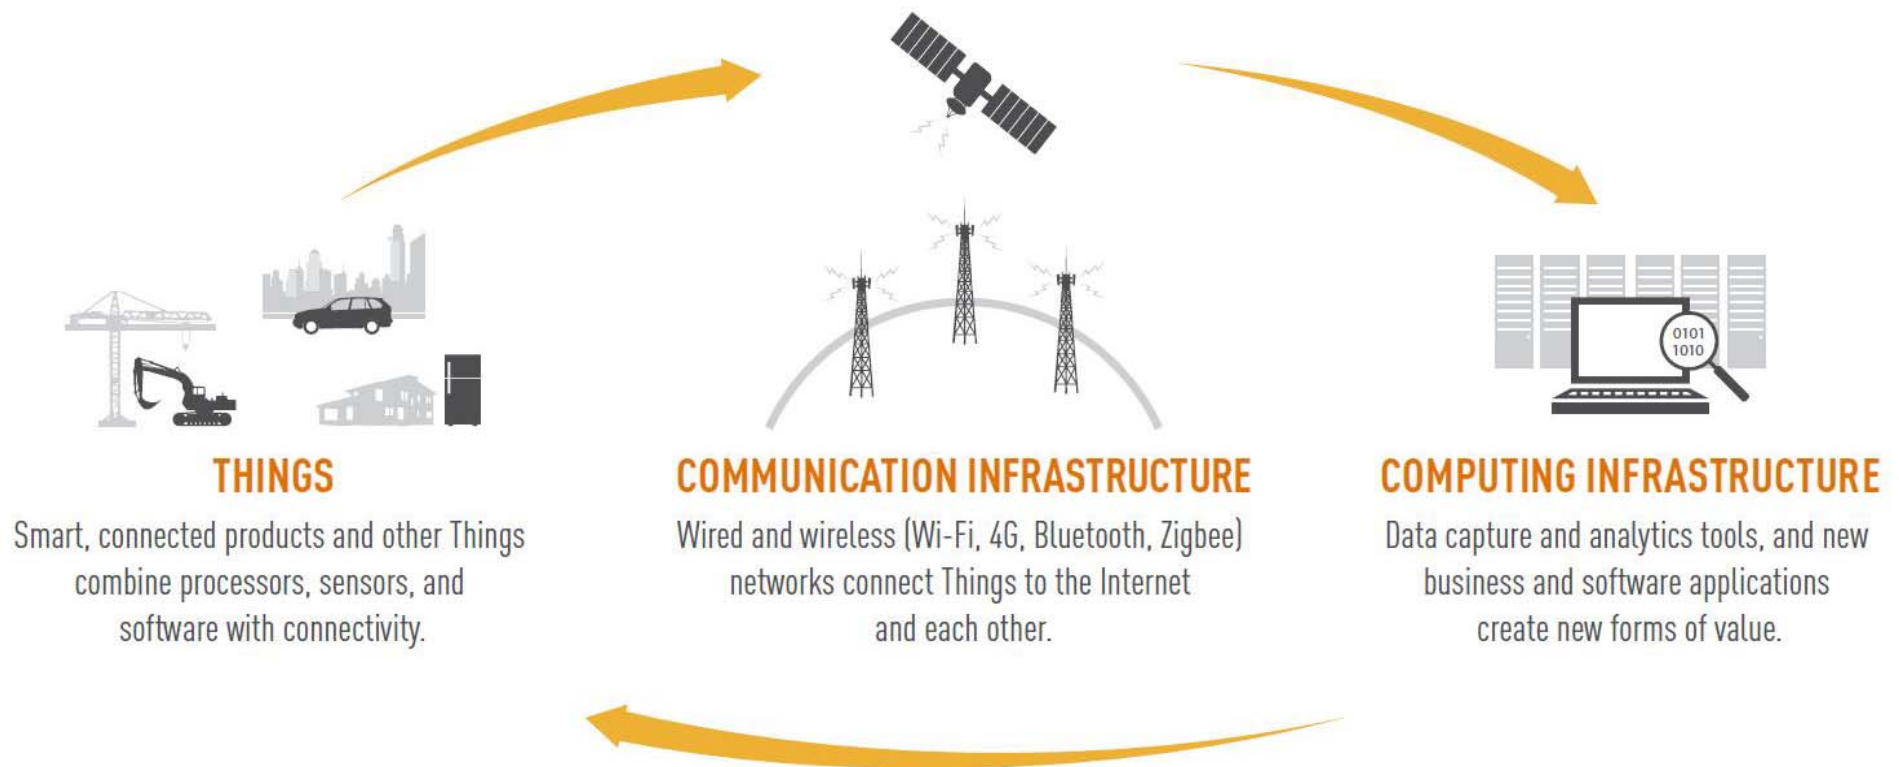

Smart, Connected Products in the Internet of Things

조용원
PTC 코리아 지사장

2014년 6월 25일

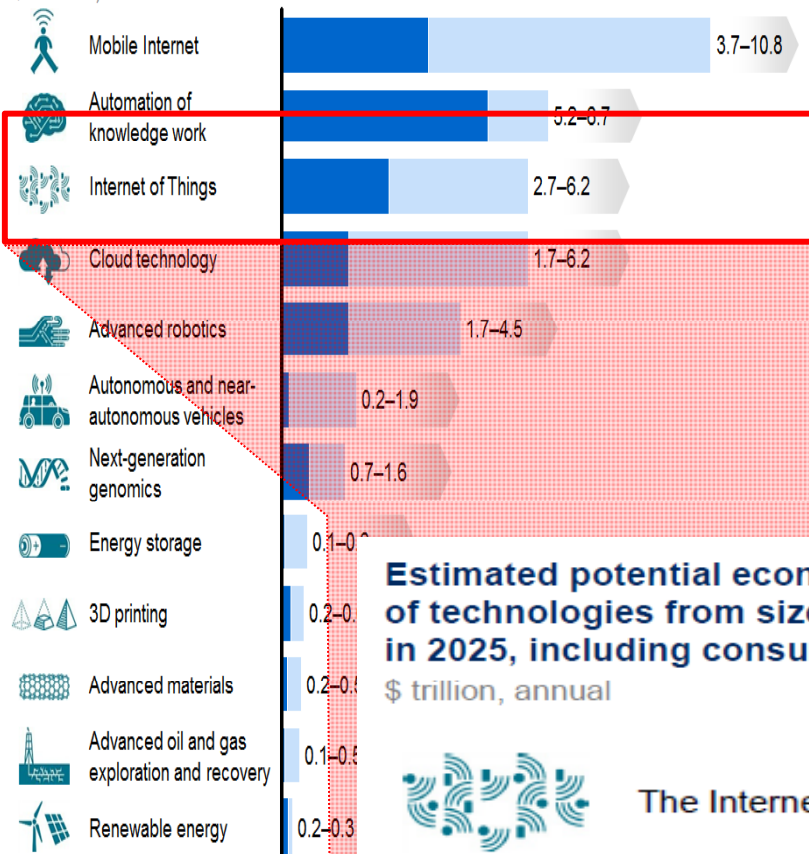

Smart, connected products and other Things connected through an Internet-like infrastructure to a computing infrastructure, creating new forms of value

Estimated potential economic impact of technologies from sized applications in 2025, including consumer surplus

\$ trillion, annual

Internet of Things is currently described as the third most disruptive technology trend by McKinsey.

Estimated potential economic impact of technologies from sized applications in 2025, including consumer surplus

\$ trillion, annual

The Internet of Things

"Huge Explosion of devices... candidly, doesn't do you any good without the applications to make them practical."

– John Chambers, CEO

\$6.2T

Estimated potential economic impact of The Internet of Things in 2025, range from \$2.7 – 6.2 trillion annually

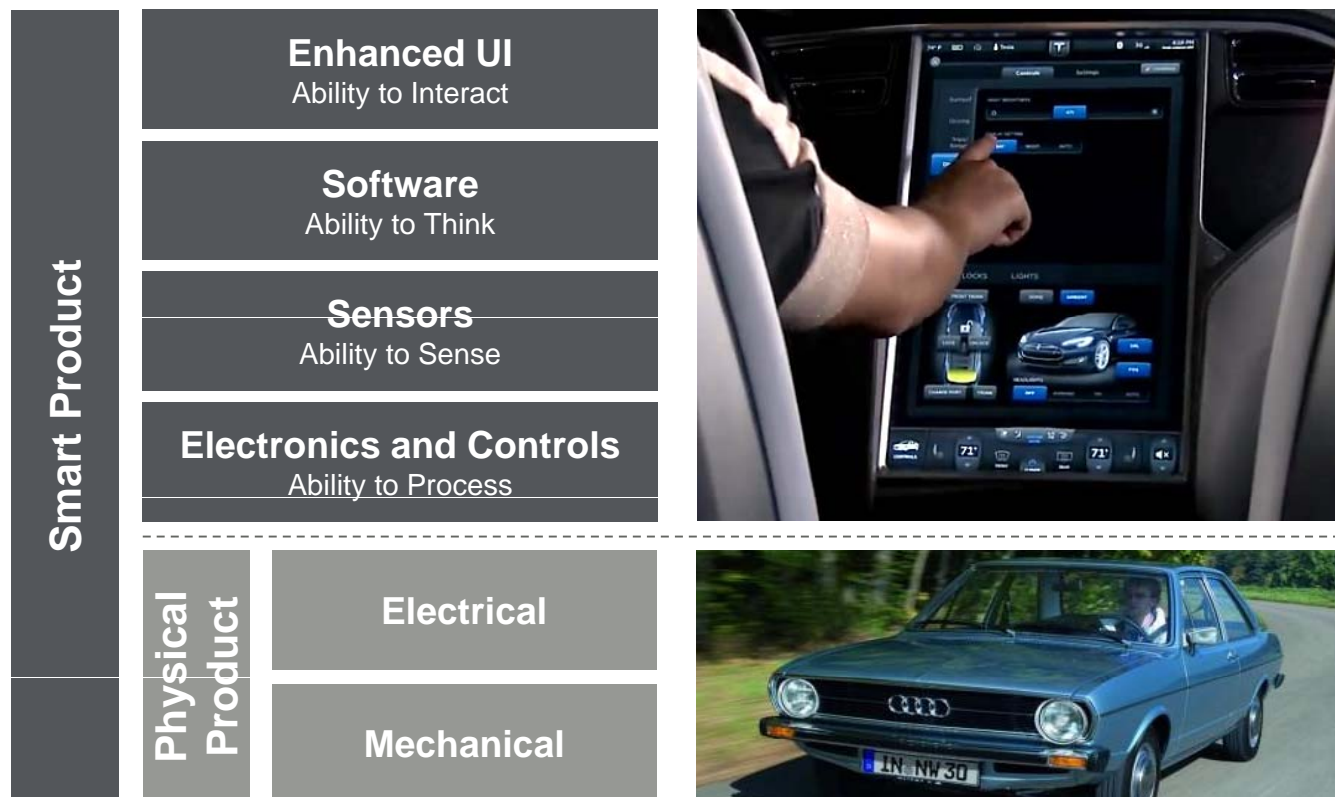

– McKinsey Global Institute

Gartner #1

Manufacturing industry will be the #1 industry sector by share of global economic value-add.

– Forecast: The IoT, Worldwide, 2013

What Are Smart Products?

Products that can process, sense, think, and interact, but are not connected

Smart Refrigerator

- Refrigerators equipped with built-in touch screens that can help keep track of food inventory and expiration dates
- Easily customize temperature of freezer, refrigerator, and water based on user preferences

Bosch Direct Drive System for Windshield Wipers

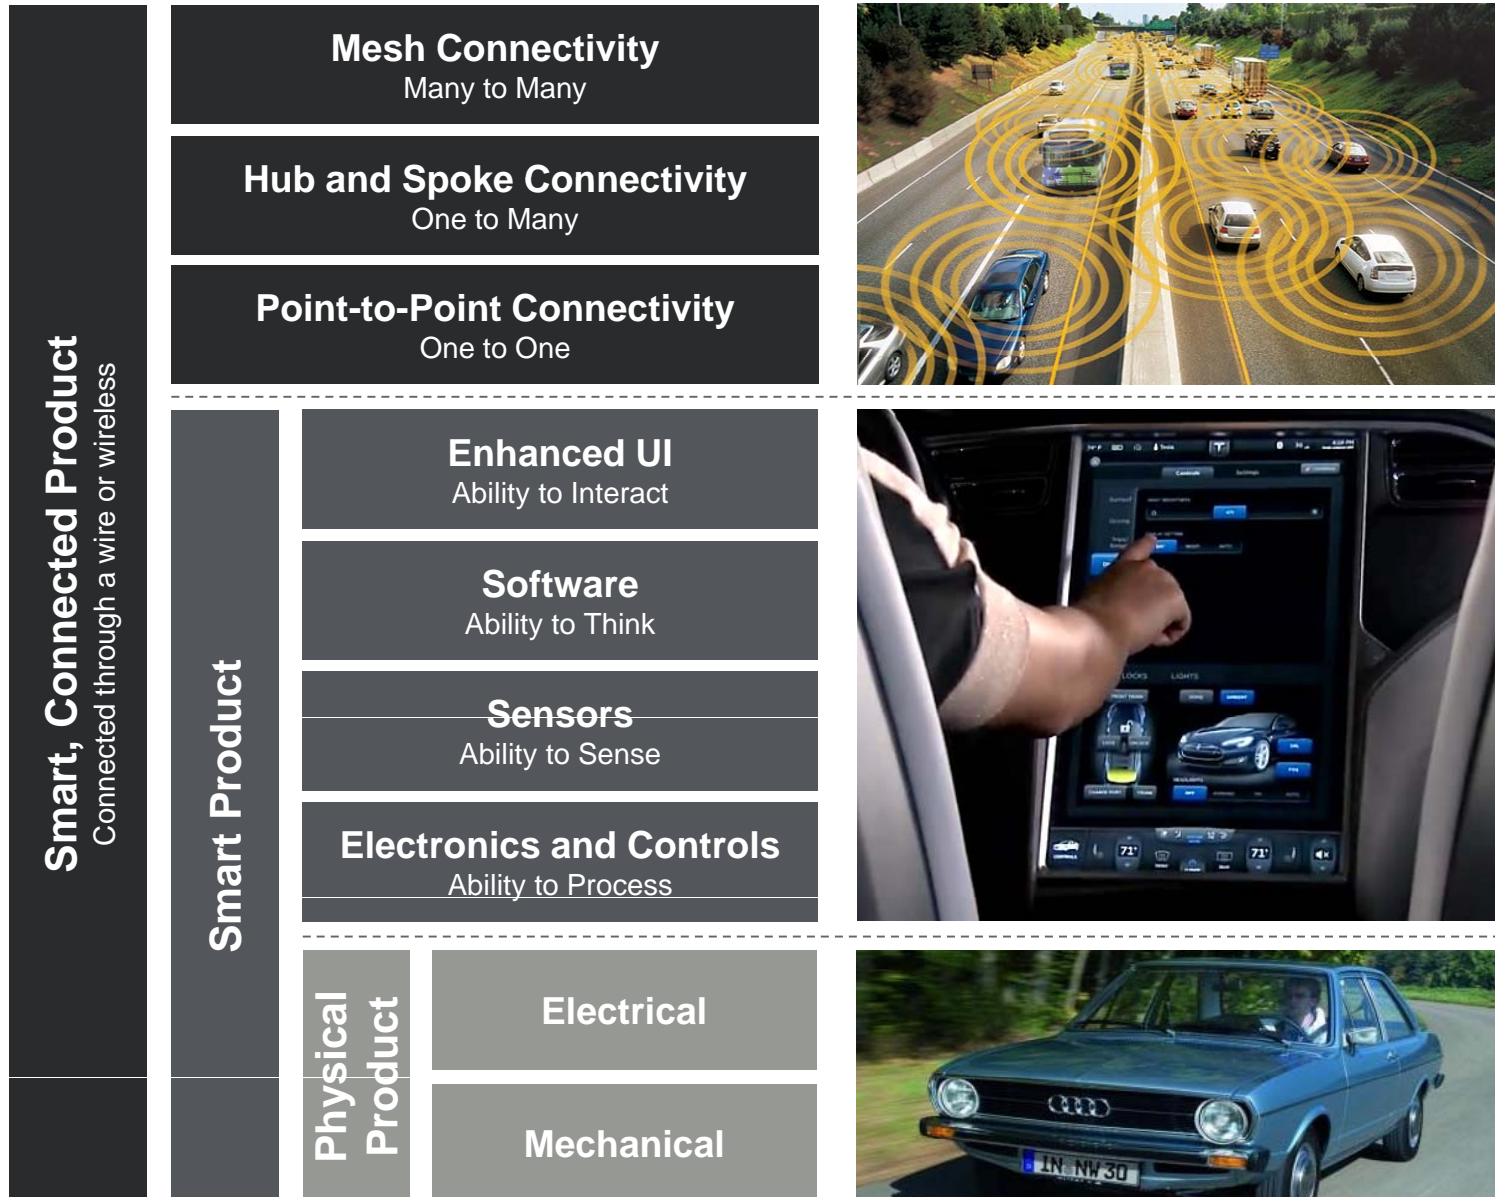

- Sensors embedded in blades detect the amount of water on the windshield and adjust speed based on how wet or dry the windshield is
- Blockage recognition system detects obstructions such as snow accumulation and adjusts area swept

Keurig Vue Brewing System

- Each Keurig coffee pack contains an RFID tag that communicates the default optimum setting for each type of beverage to the brewing machine
- Allows for user to further customize each individual cup based on user preferences in strength, temperature, and size

What Are Smart, Connected Products?

Smart products enabled by wired or wireless connectivity

John Deere FarmSight

- Harvesting sensors measure dry matter content and other soil nutrient factors
- Farm owner and dealer can proactively monitor equipment and fields to ensure peak agricultural efficiency
- Automatic, remote software updates and technician initiated solution implementation

GE's Smart Engines

- Data is used to predict inefficiencies, engine maintenance, fuel consumption, crew allocation and scheduling when these smart aircrafts can communicate with operators
- Operators know what maintenance is required before plane reaches service center
- Real-time monitoring of and communication with 30,000 engines simultaneously

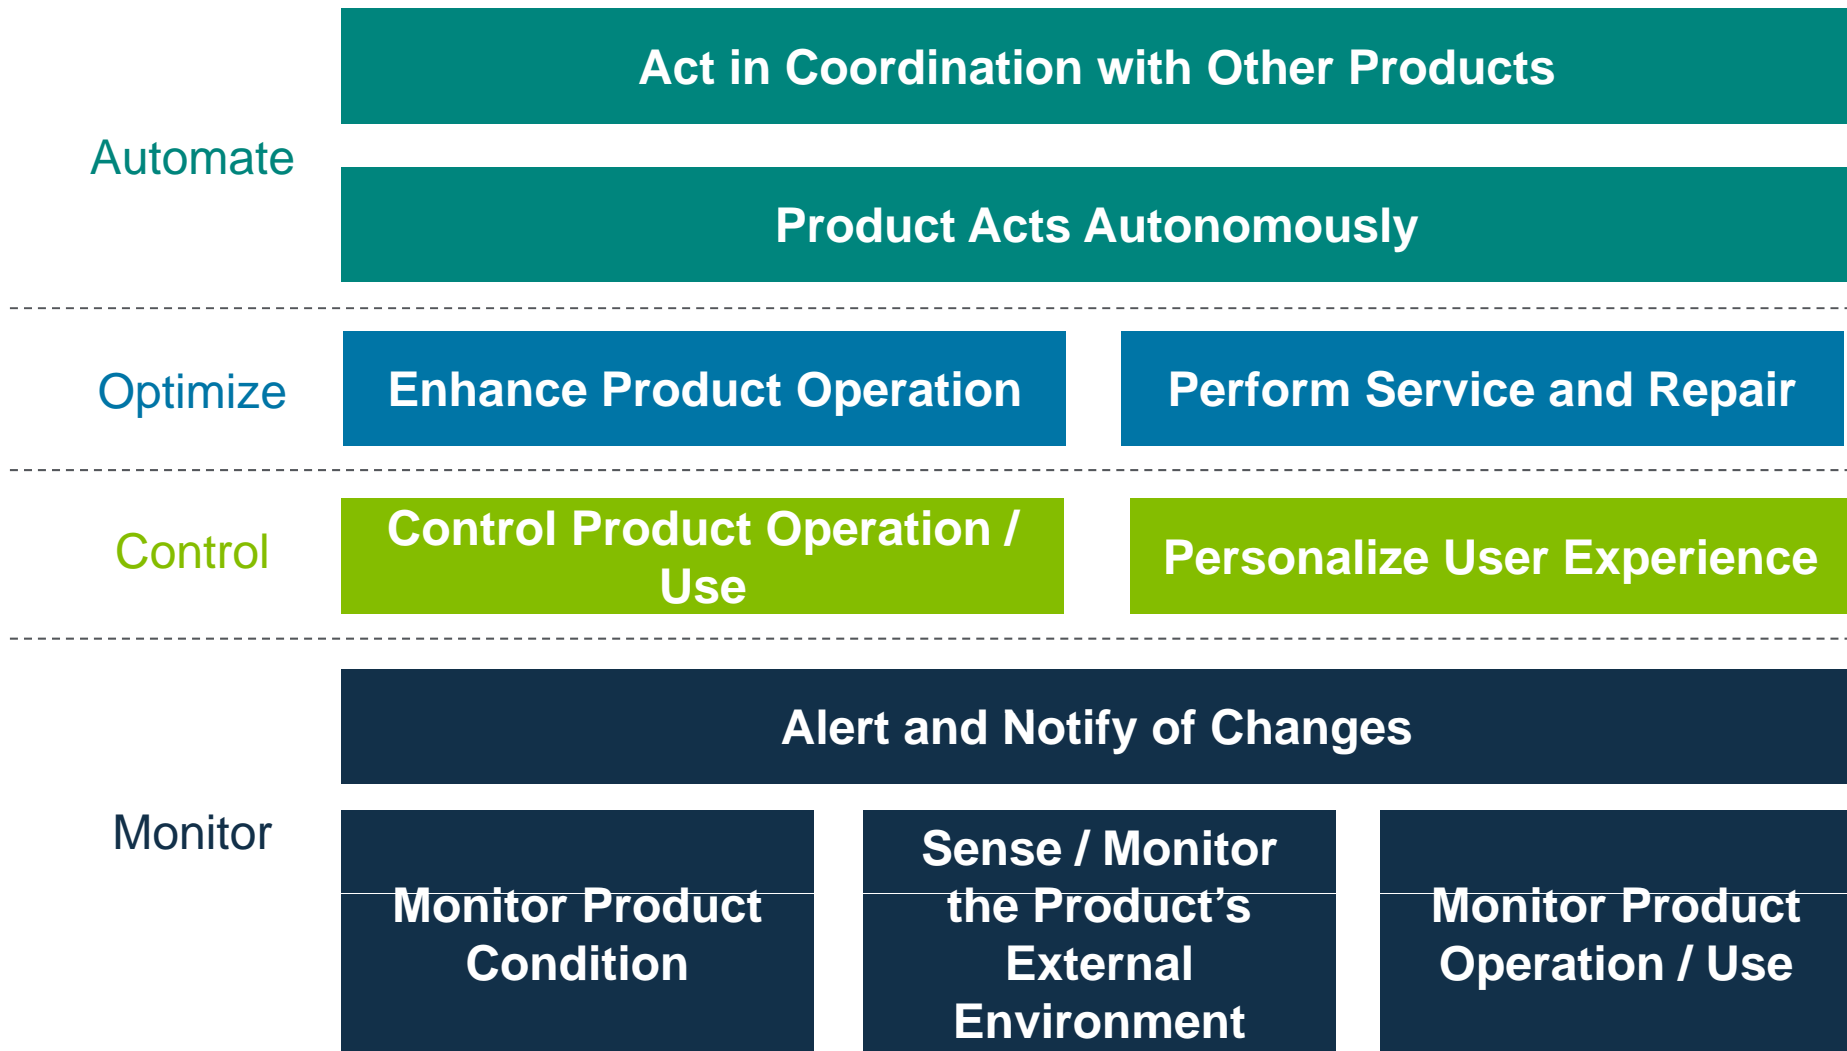

Philip's IntelliCap

- Controls the release of medicine and provides rich, detailed patient data to better inform drug development
- Records the location in the intestine using sensors and communicates wirelessly to an external receiver
- Physicians can interact with the capsule in real-time to provide further instructions

Capabilities of Smart, Connected Products

Four new categories of capabilities are enabled by smart, connected products

A shift in the emphasis of value and differentiation across industries

- **Value is Shifting from Hardware to Software**

- As manufacturers seek to accelerate product innovation and efficiently meet the growing diversity of customer demand and regulation, they increasingly turn to software.

- **Value is Shifting from Product to Cloud**

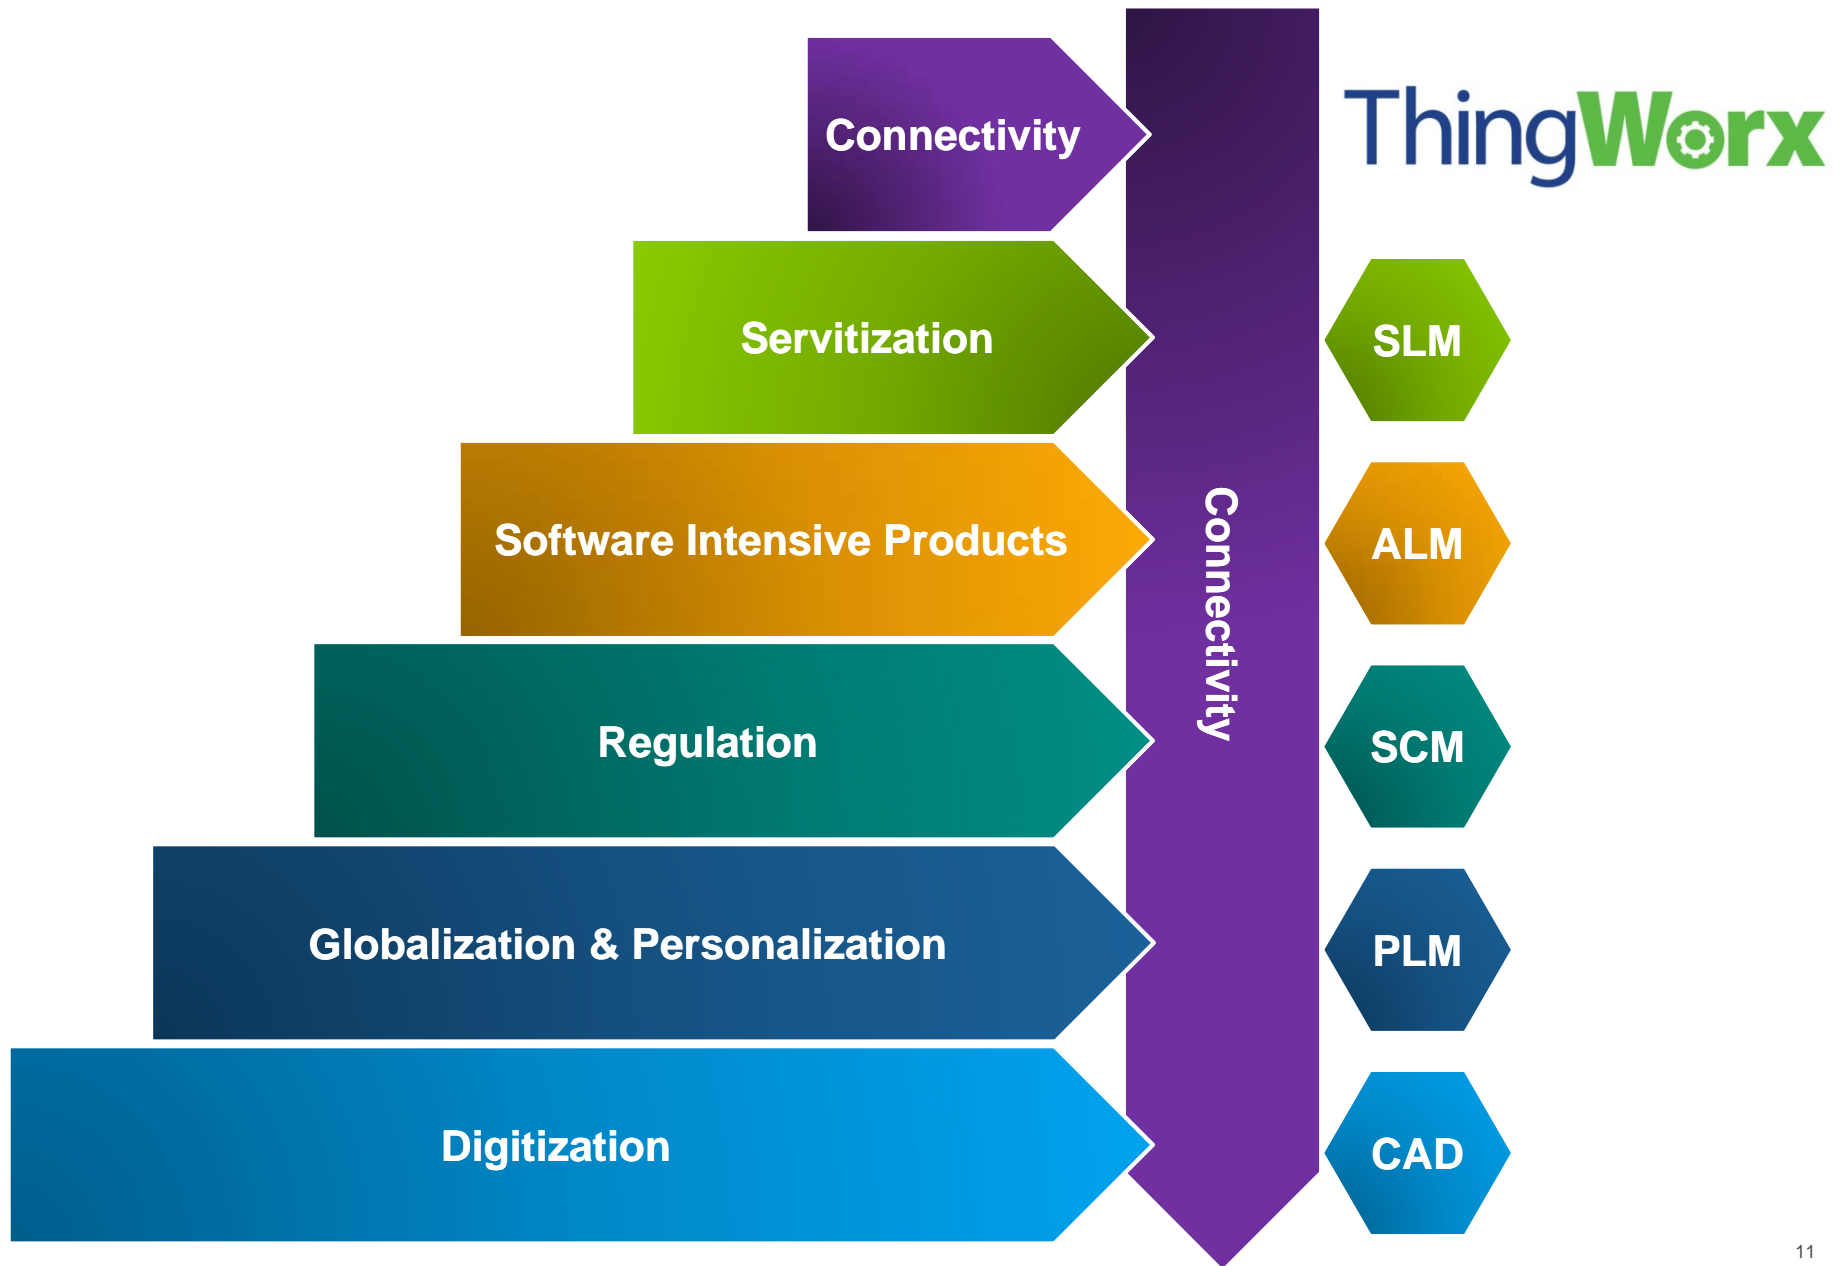

- Connecting smart products enable a digital component of the product in the cloud to extend capabilities within the product and deliver entirely new capabilities alongside the product.

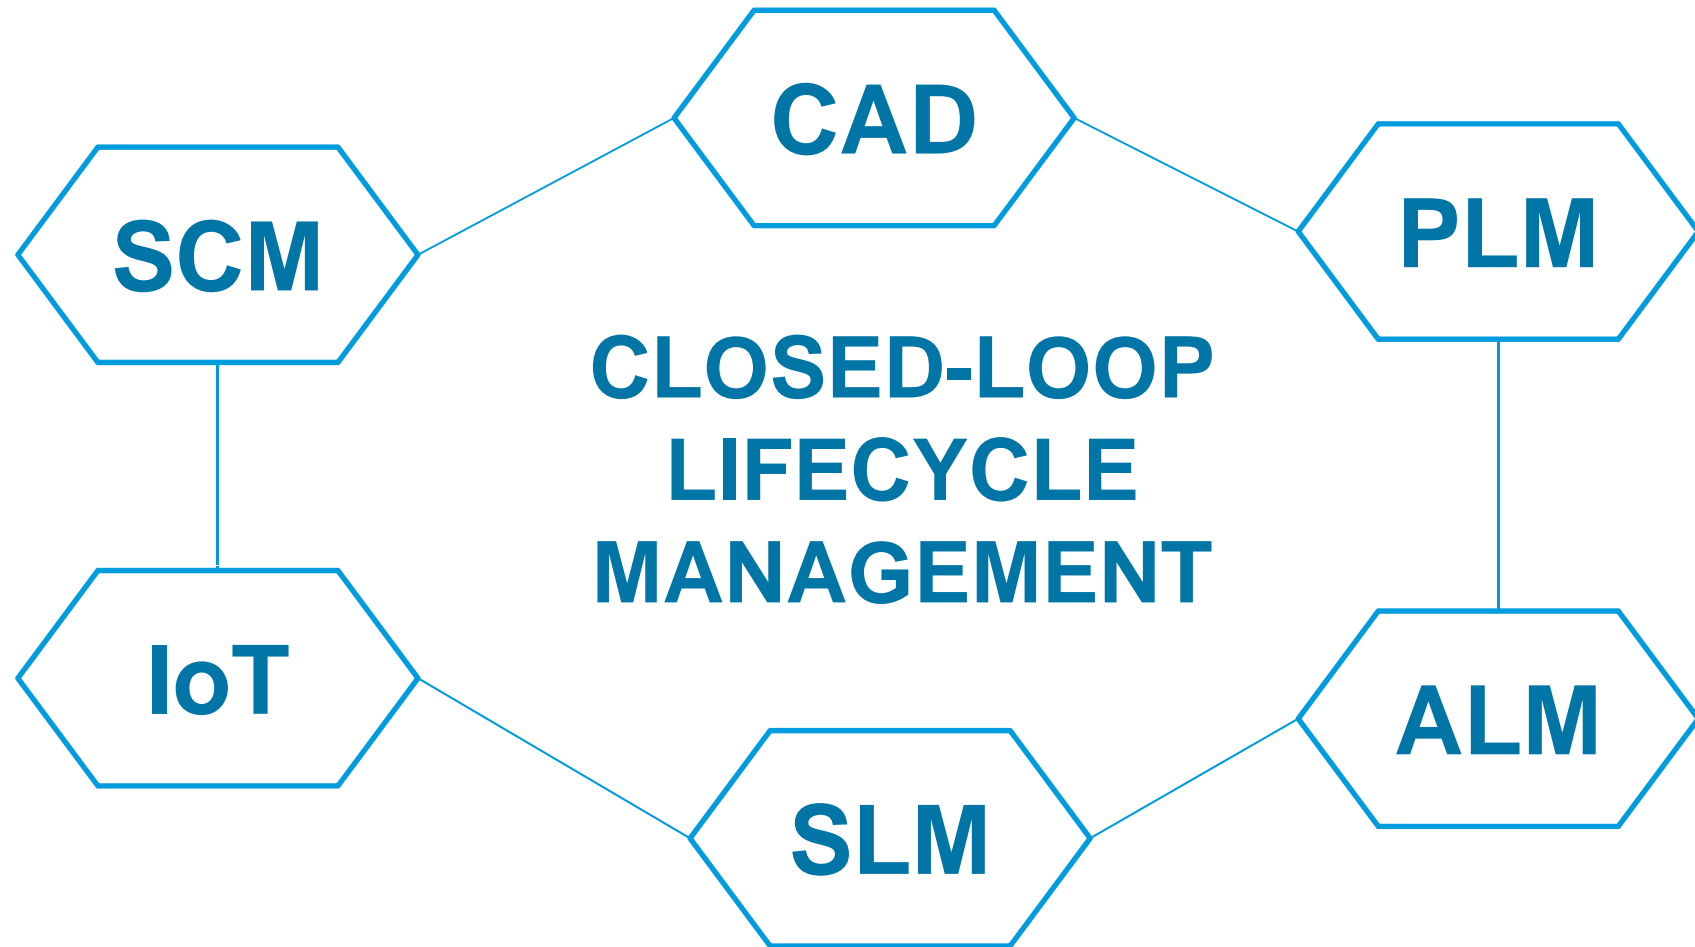

- **Value is Shifting from Product to Service**

- Products are now integrated with services that deliver new value throughout the entire product lifecycle or simply deliver the desired outcome via an on-demand service.

These Major Forces Have Driven PTC's Evolution

PTC[®]

Create

Connected Requirements Management

Monitor asset usage and compare actual performance vs. design requirements for better assessment of future needs.

Operate

Software Configuration and Release Management

Real time reporting of software versions and configurations compared with currently supported versions to prompt alerts for required updates or automatically deliver updates

Connected Quality Management

Analyze asset condition to automate failure reporting, and leverage performance data to identify quality issues and future design recommendations.

Service

Connected Field Service Management & Automated Service Execution

Error and warning codes are used to determine correct service event and provision correct parts/people.

Connected Service Knowledge Management

Real-time data on error and warning codes are used to automatically locate likely solutions and auto-creates support ticket querying product data to aid resolution.

Connected Service Parts Planning

Forecasted and installed based inventory optimization and automated replenishment based on up to date status of machine location, configuration, and status.

Connected Warranty and Contract Management

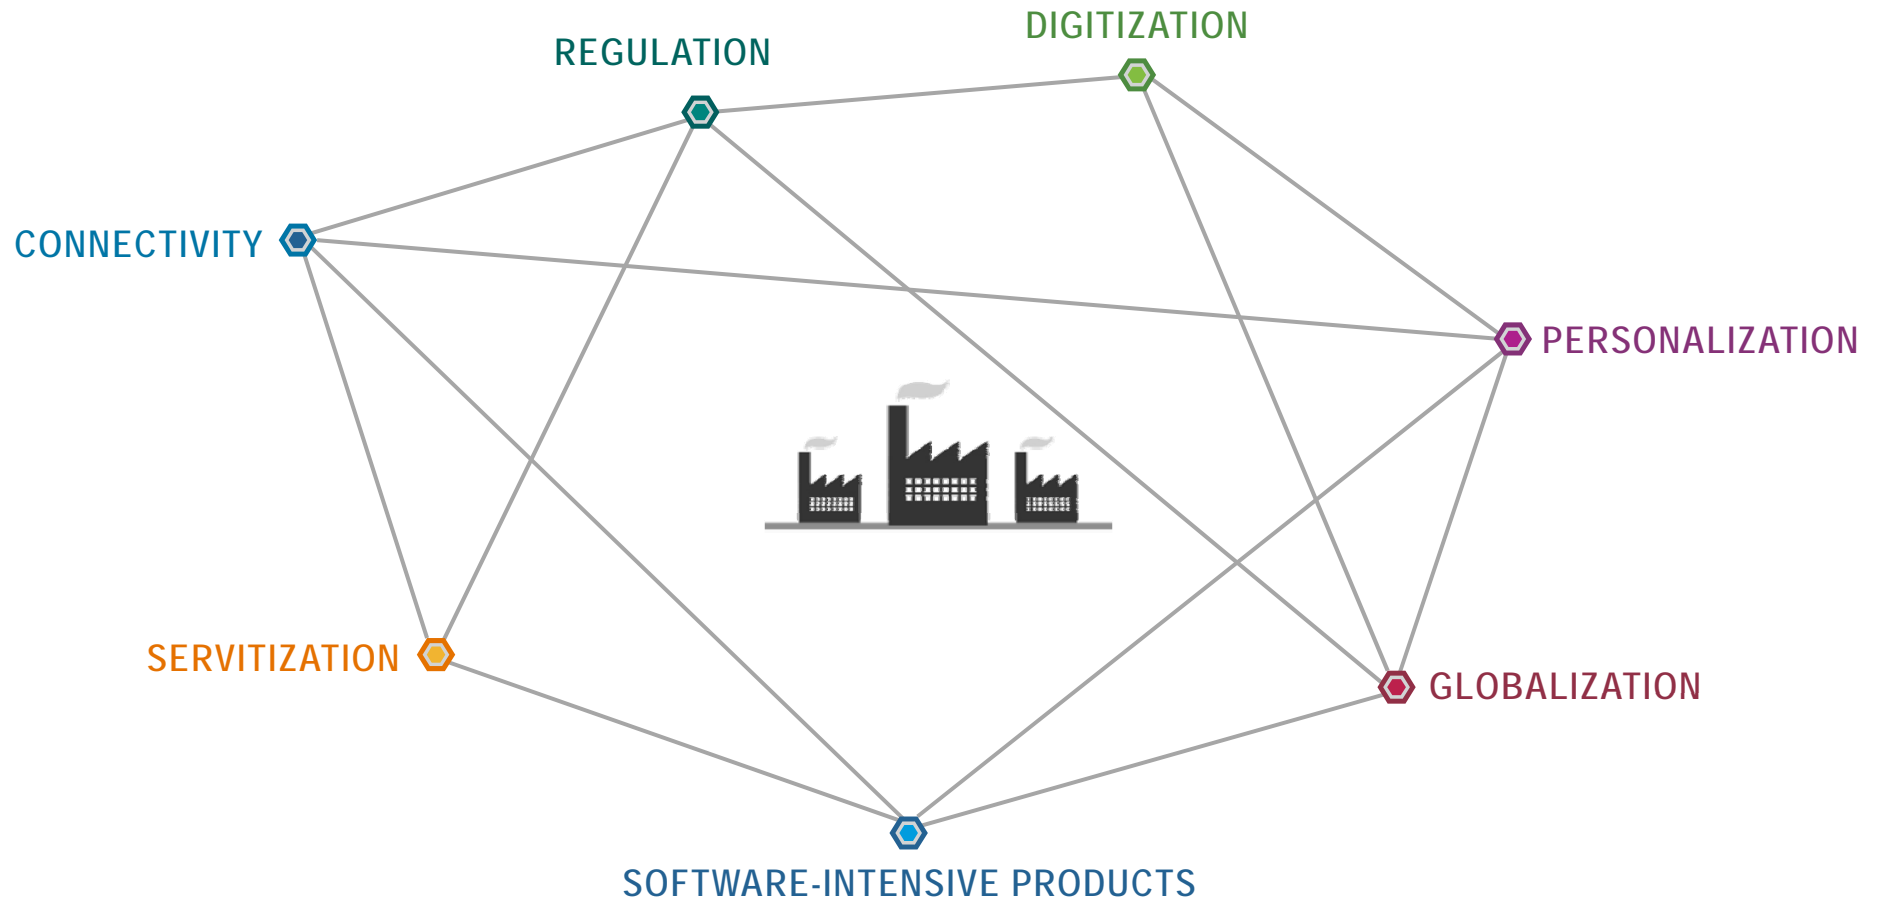

Identify root cause of failures to monitor and notify customer of non-compliance.

PTC[®]

Technology solutions that **transform** the way you **create, operate,** and **service** products

Major Forces of Transformation in Manufacturing Sector

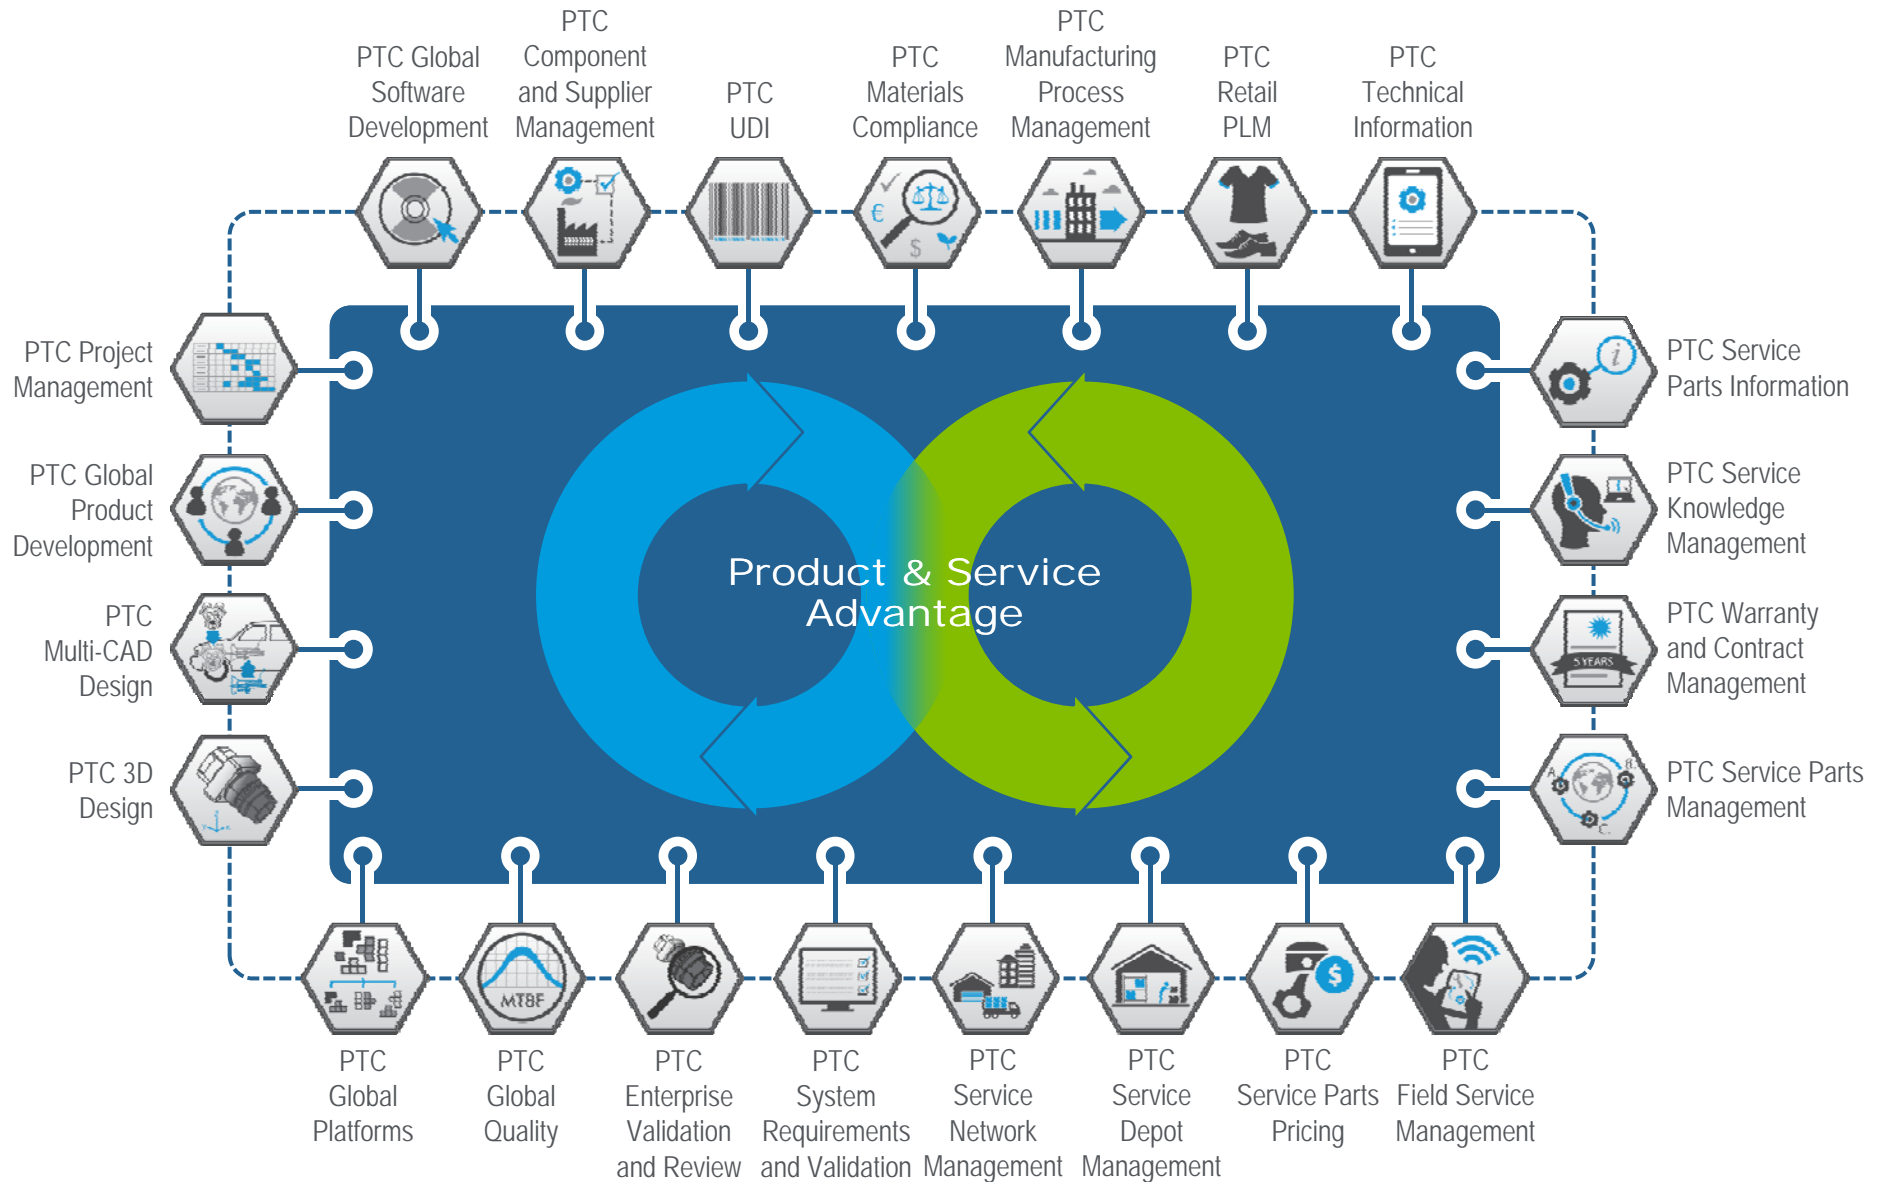

External forces are reshaping the manufacturing landscape

Products are evolving to be smart, connected and global

Value is fundamentally shifting from product to service

When combined, these forces will transform the industry

PTC System of Solutions

ThingWorx

ThingWorx™ A PTC Business

- Rapid application development and execution platform
- Modern architecture with flexibility to deploy on premise or in the cloud
- Technology leadership in Smart, Connected Products & Manufacturing
- Recognized as the industry leader

Enable the development and deployment of intuitive and powerful IoT applications 10X faster

IoT Application Development Before ThingWorx

Fixed Applications

General Purpose Development Tools

Communications Elements

Sensors, Devices & Equipment

- Complex Programming
- Build Platform Services on a Project
- Difficult to Maintain/Evolve
- High Risk, High Cost
- Barrier to Innovation

Result:
1st M2M/IoT Era Failed

ThingWorx - Purpose Built for IoT Development

Dynamic Applications
