Brake Simulation System

Kdac Overview

- **Year 1984** : Company established
- **Year 2015**
 - 9 Manufacturing plants in 4 countries (Korea, China, Thailand, India), about 2000 employees
 - 5 Manufacturing plants & 2 tech center in Korea

Kdac Overview

• Main products

Electric & Electronics

- Alternator
- Ignition coil
- EGR valve
- ECM

Thermal

- HVAC controller
- HVAC module
- Cooling fan
- Radiator
- Charge air cooler
- Condenser
- Compressor

Brake

- Caliper brake
- Proportioning valve
- Power brake
- Drum brake
- Parking brake

Steering & Drive

- Steering column
- Power steering pump
- Intermediate shaft
- Steering gear
- Halfshaft
- Intermediate drive shaft

CAE Coverage - Functionality

Available S/W @ Kdac

CFD  STAR-CCM+ Flow pattern Flow speed Flow rate Temperature Pressure analysis	Structrue Abaqus  Stress & Deformation Vibration Heat Transfer	Dynamic  RecurDyn™ MSC ADAMS Motion Analysis Kinematic Analysis System dynamic Analysis Vibration Analysis
Fatigue FE-Fatigue  Fatigue Failure Meantime to Failure	Crash & Impact  Stress & Large Deformation Failure Analysis Crashworthiness Simulation	Injection molding  Weldline prediction Warpage prediction Sink mark prediction Fiber orientation analysis
Optimization  Altair® HyperWorks® Topology Optimization Morphing for Shape Variables Composite Laminate Optimization Optimization for New Response	Electro-Magnetic  /E-mag Electrostatics Magnetostatic Steady-State Current Conduction	Post process  En-Sight Advanced Animation Visualization Surface Particle trace Transient Data

CAE Coverage – Driveline

VPD Vision and Key Success Factors

**It is apparent that CAE is a vital tool
in Product Development.**

**Methods continuously improving, but
CAE Role ?**

VPD Vision and Key Success Factors

VPD Vision and Key Success Factors

**Better be organized
and managed
within system**

**Scripts itself,
Not enough**

Better be linked

**Repetitive, Tedious,
Time-consuming tasks
in Pre/Post Processing**

**Task Automation
with Scripts**

Caliper Brake Simulation

Squeal Noise Analysis

Pad Wear Analysis

Pad Contact Pressure Analysis

Inboard		Outboard	
Deviation	S/N Ratio	Deviation	S/N Ratio
Value [mm]	Value [dB]	Value [mm]	Value [dB]
1.5	10	2.0	9.0

관련 동영상

The screenshot shows a Windows Explorer window titled "CASE1 검색" (CASE1 Search). The address bar indicates the path: "Pressure_Distribution > CASS_TEST > CASE1". The left sidebar shows the "라이브러리" (Library) section with various file types like "즐거찾기" (Favorites), "다운로드" (Downloads), "바탕 화면" (Desktop), "최근 위치" (Recent locations), "사진" (Pictures), "문서" (Documents), "비디오" (Videos), "음악" (Music), "컴퓨터" (Computer), "OS (C:)", "DATAPART1 (D:)", "DATAPART2 (E:)", and "네트워크" (Network). The main pane displays a list of files and folders:

이름	수정한 날짜	유형	크기
Deviation	2014-06-23 오전 9...	파일 폴더	
INP	2014-06-23 오전 8...	파일 폴더	
CASE1.odb	2014-06-20 오전 1...	ODB 파일	466,865KB

At the bottom, it indicates "3개 항목" (3 items).

현재의 해석 과정

$$S / N = \eta_{dB} = 10 \times \log \left(\frac{\bar{y}^2}{\sigma_{n-1}^2} \right)$$

The screenshot shows a Windows File Explorer window with the address bar set to `\\DATAPART2 (E:) > STUDY > Pressure_Distribution > CASS_TEST > CASE1`. The search bar contains `CASE1 검색`. The left sidebar shows the navigation pane with `컴퓨터` expanded, showing `OS (C:)`, `DATAPART1 (D:)`, and `DATAPART2 (E:)`. The main pane displays a list of files and folders:

이름	수정한 날짜	유형	크기
INP	2014-06-23 오전 1...	파일 폴더	
CASE1.dat	2014-06-16 오전 8...	DAT 파일	644KB
CASE1.odb.bin	2014-06-23 오전 1...	BIN 파일	133,074KB
fe_Pad.inp	2014-01-08 오후 5...	INP 파일	2,123KB

The status bar at the bottom indicates `4개 항목`.

Taper Wear Analysis

AS-IS

TO-BE

AS-IS (Manual)

TO-BE (Automation)

▶ Manual Method를 이용한 Pre-Process 수행 과정

- ☞ Text editor를 이용하여 수작업으로 input file의 내용 (Include file, parameter등)을 수정함.
- ☞ 마모시험 data를 이용하여 excel에서 마모계수를 도출하고, text editor를 이용하여 user subroutine file의 내용을 수정함.
- ☞ Solving을 위한 batch file 수정 작업을 수작업으로 진행.

▶ 자동화 프로그램(CASS)를 이용한 Pre-Process 수행 과정

- Parameter 값을 user가 입력하면 input file의 내용을 자동으로 수정하고, 마모시험 data를 이용하여 마모계수 도출, user subroutine file, batch file 생성 작업이 자동으로 진행 됨.

Brake Contact Pressure Analysis

AS-IS (Manual)

TO-BE (Automation)

▶ Manual Method를 이용한 Post Process 수행 과정

- 온도별 패드 마모 해석 contour 결과 image를 수작업으로 capture하여 excel template file에 붙여 넣음.
- Pad(Inner/outer) node에서의 wear 결과값을 수작업으로 추출하여 taper wear 분석을 위한 excel template file에 붙여 넣음.
- Excel template file의 image, graph 및 마모결과 값을 이용하여 수작업으로 report를 작성함.

▶ 자동화 프로그램(CASS)를 이용한 Post Process 수행 과정

- 자동으로 pad wear contour 결과 image capture, wear data 추출하여 average wear 와 taper wear 결과 도출을 위한 excel template file과 PPT report를 생성함.

Benefit from Brake Simulation System

Squeal Noise Analysis

해석 1Set 수행시
절감시간
3Hours

평균 해석 Set
/ 프로젝트
50 Set

연간 Project
수행 건수
3건

연간 절감 효과
450 hrs
(50 working days)

Pad Contact Pressure Analysis

해석 Case당
절감 시간
1hours

Cases
100 Cases

연간 Project
수행 건수
3건

연간 절감 효과
300 hrs
(33 working days)

Benefit from Brake Simulation System

- Improved engineering reusability
 - Data management standardized
 - Full pedigree of data managed
- Increased engineering throughput
 - Reduce simulation turn-around time
 - More engineering cycles to do more complex tasks
 - Increase simulation throughput
- Protect and retain corporate IP
(Knowledge, Methods, Data, Etc)
